VINCE DARRIGO

Applied AI Backend Engineer | Python Integration Developer

Deltona, FL · (702) 514-0888 · vincent.darrigo@gmail.com · vincentdarrigo.github.io/portfolio

Python backend engineer and integration specialist, largely as a result of being a tireless problem solver in any role. Technical solution-building has been the constant of my career, regardless of the platform or objective. The rise of LLM-backed agents and modern AI tooling is the most powerful accelerant my capabilities have ever encountered, and I want to keep pouring gasoline on the fire. I now complement my business solutions development with game and competition application design, and am soon releasing something of my own little app store for tiny simple but useful applications.

CORE SKILLS

Backend & AI: Python, Flask, FastAPI, REST APIs, Pydantic, Anthropic/OpenAI, LLM-backed agents, prompt engineering
Real-Time & Frontend: Socket.IO, WebSockets, JavaScript, TypeScript, React , HTML/CSS, role-based UX, UI design
Data & Integrations: PostgreSQL, SQLite, Smartsheet API, Google APIs, Microsoft Graph, Power Platform,
Production Patterns: GitHub, Render, background jobs, job scheduling, batching, retries, logging, exception handling

PROFESSIONAL EXPERIENCE

Senior Data Specialist | Safal Partners - Remote | Apr 2025-Present

- Technical lead for Texas' statewide Instructional Materials Review and Approval project. Architected the software layer managing assignments, approvals, and support workflows for 1,500+ reviewers.
- Engineered Python integrations connecting Smartsheet, Google Drive, and internal reporting workflows, replacing fragmented data silos with a unified, automated data pipeline.
- Built a full-stack web portal with role-scoped frontend experiences, replacing Smartsheet-as-UI with a real application, syncing Smartsheet and Google Workspace without requiring Smartsheet's Enterprise webhook licensing costs.
- Developed and shipped human-in-the-loop LLM agents for customer support. The system classifies incoming tickets, executes custom research, and queues resolution proposals for human approval before executing any system actions.
- Prototyping a Microsoft Teams-integrated AI chatbot assistant capable of navigating and managing the internal data ecosystem via conversational input.

Smartsheet Developer Specialist | Maximus - Remote | Jul 2023-Mar 2025

- Overhauled fragile manual statewide performance and attendance platforms, resulting in auditable, automated workflows using Smartsheet, SharePoint, Power Automate, and Power BI.
- Delivered a fully automated workforce time-tracking system and mapped Smartsheet/SharePoint data structures to warehouse-ready schemas to support a large-scale Snowflake migration.
- Targeted core user pain points to develop custom automations, reporting views, and targeted documentation that drove platform adoption among non-technical teams.

Data Solutions Architect | Rust Belt Technologies - Remote | Jan 2020-Jun 2023

- Architected workflow systems, vendor/customer portals, and API integrations for SMBs across the manufacturing, retail, and professional services sectors.
- Utilized Power Automate and REST APIs to interconnect Smartsheet, SharePoint, Outlook, and Google Workspace, transforming isolated productivity software into cohesive business systems with or without Smartsheet API access.

SELECTED PROJECTS

IMRAface - Flask / FastAPI / SQLite / Anthropic API / Python: Role-scoped operations platform with live HITL ticket agent, managing and integrating Smartsheet with multiple data sources, for the equivalent cost of 2 Smartsheet editor licenses.

Anytime AI Trivia - FastAPI / WebSockets / OpenAI GPT-4o / JavaScript: AI-generated trivia, four types of questions plus trick questions, Challenge AI adjudication, and growing question bank for offline games.

I Spy AI / I Spy A Pie - Flask / Socket.IO / GPT-4o / Google Maps / Vision: Real-world location and trivia based scavenger hunt, AI-generated locations, clues, and mode-specific UX. Pie version is an alternate game focused solely on pizza.

Scattergories: Next Level - Flask / Socket.IO / OpenAI GPT-4o: Classic family board game with an AI infusion. Next Level release coming soon, adding a much needed layer of strategy. One of many games I whip up for fun Teams meetings.

EDUCATION & CERTIFICATIONS

· Microsoft Python Development Professional Certificate (2025) · Smartsheet Core Product Certification (2024)
· B.S., Technical Management, DeVry University (2008) · A.A., Political Science, Daytona State College (2005)
